How do I manage multiple accounts on the MT5?

Trading Platform · https://maintest.windsorbrokers.com/knowledge-base/trading-platform/how-do-i-manage-multiple-accounts-on-the-mt5/

Managing multiple accounts on MetaTrader 5 (MT5) is quite flexible and can be done in several ways. Here’s how you can effectively manage multiple accounts:

Using the Navigator Window:
• Open the "Navigator" window (Ctrl + N).
• All your accounts will be listed under the "Accounts" section. You can switch between accounts by double-clicking on the desired account.
• To add a new account, right-click on "Accounts" and select "Open an Account." Follow the prompts to log in with your credentials.

Running Multiple Instances of MT5:
• You can install multiple instances of MT5 on your computer, each in a different directory. This allows you to run multiple accounts simultaneously.
• Download the MT5 installer and choose a different installation folder for each instance.

Using Virtual Private Servers (VPS):
• If you are using Expert Advisors (EAs) or need 24/7 trading, consider using a VPS. You can set up each account on a separate VPS to ensure continuous operation without interruptions.

Using Mobile and Web Platforms:
• MT5 also supports mobile and web platforms, allowing you to manage your accounts on the go. You can log in to different accounts on your smartphone or tablet using the MT5 app.
